

Landing Page Product Requirements Document

Flick — Pre-App Landing Page

Author: Product Designer & Engineer

Version: 1.0.0-en-landing

Date: May 2026

1. Purpose

This document defines the product requirements for the **Flick landing page only**.

The landing page exists to:

- explain what Flick is within seconds,
- attract creators to start onboarding,
- communicate that tipping is fast, simple, and creator-first,
- and drive users into the primary onboarding flow.

The page should present Flick as a lightweight digital tipping product where creators can claim a personal tip page and receive support with minimal friction.

2. Route

Primary Route: /

This is the public marketing and entry page shown before a user enters the app flow.

3. Core Message

Primary Value Proposition

Receive Tips in a Flick.

Supporting Message

Flick helps creators set up a personal tipping page, share it instantly, and receive fast digital support from fans.

Product Positioning

The product should feel:

- simple,

- fast,
- tactile,
- modern,
- creator-first,
- and emotionally lightweight.

4. Audience

The landing page is primarily designed for:

- creators,
- indie builders,
- designers,
- artists,
- online personalities,
- and web-native users who want a simple way to receive tips.

5. Landing Page Requirements

5.1 Hero Section

The hero must communicate the product instantly and clearly.

Requirements:

- Show a strong headline centered around the core message: **“Receive Tips in a Flick.”**
- Include a short subheadline explaining that creators can create a personal tip page and receive support easily.
- Include a clear **primary CTA**: **“Create Your Tip Jar”**.
- The CTA should open the **Reown AppKit modal**.
- Use **minimal typography animation** to make the hero feel alive without becoming distracting.
- The hero should make the product feel premium, modern, and fast.

5.2 CTA / Entry Flow

The landing page should guide users directly into onboarding.

Requirements:

- The primary CTA opens the Reown authentication modal.
- The modal flow should support:
 - wallet connection,
 - email registration,

- Google sign-in.
- The CTA should feel immediate, tactile, and trustworthy.

5.3 Messaging Priorities

The page should emphasize:

- speed,
- simplicity,
- low-friction onboarding,
- and creator-first positioning.

The landing page should avoid technical blockchain-heavy language in the first impression.

6. UX Direction

The landing page should feel like the front door to a creator product, not a technical dashboard.

UX Principles

- Reduce cognitive load.
- Explain the product quickly.
- Focus on one clear action.
- Make onboarding feel easy and low-commitment.
- Build trust without feeling corporate or bank-like.

Interaction Principles

- Motion should feel light and responsive.
- Visual feedback should feel immediate.
- CTA interactions should feel premium and clickable.
- Scrolling and section transitions should feel smooth.

7. Visual Design Direction

The page should visually align with Flick's tactile and premium product identity.

Style Requirements

- modern startup aesthetic,
- clean bright layout,
- rounded UI,
- generous white space,

- refined typography hierarchy,
- subtle premium motion,
- restrained glassmorphism where helpful.

Motion Requirements

- Use **Framer Motion** for subtle hero and UI transitions.
- Avoid heavy animation that harms clarity or performance.
- Motion should reinforce the idea of **flick**, **speed**, and **lightweight action**.

Tone to Avoid

Avoid making the page feel:

- overly technical,
- crypto-degen,
- dark neon web3,
- generic SaaS template,
- or cluttered.

8. Functional Requirements

Authentication Hook

The landing page must connect cleanly into the onboarding flow.

Requirements:

- CTA opens Reown AppKit.
- User can authenticate through supported methods.
- After successful login, the next destination should continue toward creator onboarding.

Performance Requirements

- Landing page should load quickly.
- Hero content should be readable immediately.
- Animations must not block usability.
- Layout must work cleanly on desktop and mobile.

Responsive Requirements

- Must be polished on mobile-first layouts.
- CTA should remain easy to discover on smaller screens.
- Typography and spacing should scale cleanly across screen sizes.

9. Recommended Section Structure

The landing page should at minimum contain:

1. Hero Section

- Headline
- Subheadline
- Primary CTA
- Supporting visual or preview element

2. Simple Product Explanation

- Explain how Flick works in a lightweight way
- Emphasize creator tipping and low friction

3. Trust / Value Strip

- Fast setup
- Personal public tip page
- Simple support flow
- Creator-first experience

4. Final CTA Section

- Reframe the value proposition
- Repeat the primary action

This structure should remain concise and conversion-focused.

10. Technical Implementation Notes

Frontend Stack

- **Next.js 14 (React)**
- **TypeScript**
- **Tailwind CSS**
- **Framer Motion**
- **Reown AppKit**

Purpose of Each Layer

- **Next.js / React:** page rendering and routing
- **Tailwind CSS:** styling system
- **Framer Motion:** smooth UI motion and hero animation

- **Reown AppKit:** authentication entry point for users

This landing page should remain lightweight and should not expose backend complexity to the user.

11. Success Criteria

The landing page is successful if it:

- communicates the product clearly in under a few seconds,
- makes the creator value proposition obvious,
- drives users toward **Create Your Tip Jar**,
- and feels modern, polished, and creator-native.

12. Final Summary

This document intentionally covers **only the Flick landing page**.

The landing page should act as a high-conviction entry point that introduces Flick, communicates the core value proposition, and pushes users directly into onboarding through a simple and premium experience.
